Amendments in the Claims: (struck-through parts deleted and underlined parts added)

1. (currently amended) A teargas deploying device for removably mounting to a female receiver on a vehicle, said device being adapted for releasing teargas from a teargas canister and into a dwelling through a wall of the dwelling, said device

10 comprising:

an elongated tubular member having a first end and a second end, said first end being closed and having a pointed shape, said second end being open, a plurality of apertures extending into said tubular member, each of said apertures being positioned generally adjacent to said first end;

15 a canister receiving housing being fluidly coupled to said second end and

extending away therefrom, wherein a teargas canister may selectively be positioned into said housing the teargas canister may be removably positioned in said housing;

a male bracket being attached to said housing for removably mounting said

20 housing to the female receiver such that the tubular member extends away from the vehicle;

a stabilizing assembly being attached to said tubular member and said housing, said stabilizing assembly including a plurality of fins being attached to and extending along and abutting area of said tubular member and said housing, each of said fins radially extending outwardly from said tubular member and said housing; and

25 wherein said first end of said tubular member may be extended through a the wall such that the teargas released from the canister may enter a the dwelling bound by the wall.

30

2. (original) The device of claim 1, wherein said housing has an opening positioned opposite of said tubular member for receiving the canister, a cover being removably attached to said housing for selectively opening or closing said opening.

5 3. (original) The device of claim 1, wherein said male bracket includes a first arm and a second arm attached together at a generally perpendicular angle such that said first arm is vertically orientated and said second arm is horizontally orientated, said second arm having a free end being removably extendable into said female receiver, said first arm having an upper end attached to said housing.

10

Claims 4 and 5 (cancelled)

15 6. (currently amended) A teargas deploying device for removably mounting to a female receiver on a vehicle, said device being adapted for releasing teargas from a
teargas canister and into a dwelling through a wall of the dwelling, said device comprising:

20

an elongated tubular member having a first end and a second end, said first end being closed and having a pointed shape, said second end being open, a plurality of apertures extending into said tubular member, each of said apertures being positioned generally adjacent to said first end;

25

a canister receiving housing being fluidly coupled to said second end and extending away therefrom, said housing having an opening positioned opposite of said tubular member, wherein a teargas canister may selectively be positioned into said housing the teargas canister may be removably positioned in said housing, a cover being removably attached to said housing for selectively opening or closing said opening;

30

a male bracket being attached to said housing for removably mounting said housing to the female receiver such that the tubular member extends away from the vehicle, said male bracket including a first arm and a second arm attached together at a generally perpendicular angle such that said first arm is vertically orientated and said second arm is horizontally orientated, said second arm having a free end being removably extendable into said female receiver, said first arm having an upper end attached to said housing;

5 a stabilizing assembly being attached to said tubular member and said housing,
 said stabilizing assembly including a plurality of fins being attached to and
 extending along and abutting area of said tubular member and said
 housing, each of said fins radially extending outwardly from said tubular
 member and said housing; and

10 wherein said first end of said tubular member may be extended through a the wall
 such that the teargas released from the canister may enter a the dwelling
 bound by the wall.

Claim 7 (cancelled)
